

Len Reggie Cutter / Baler

As long as I have known Len Reggie he has talked about harvesting WSG with a single pass system. He finally has a machine that will do just that. He mounted a “cutter blade” on the front of a small square baler. The blade is powered by a hydraulic motor

and spins to cut the grass. The baler forks pick up the grass and push it out as bales. He plans to process the bales into poultry bedding using the SARE Portable Poultry Bedding System.
